Mr. Hussain Dada
Non Executive Director

Hussain Dada received his schooling at the Karachi American School, following which he pursued his higher education in the United States, where he read Mechanical Engineering and Space Physics. His formal grounding in the physical sciences continues to inform his approach to the technical and analytical aspects of the mining business.

H Dada is a founding partner and the serving Technical Director of Mohmand Dada Minerals (Pvt.) Limited (modminerals.com), established in 2002. Now a second-generation mining enterprise operating across Pakistan and Afghanistan, the company quarries and processes dimension stones — marble, onyx, granite, quartzite, travertine, limestone and sandstone — and iron ore and holds interests in industrial minerals and metals including placer gold, copper, chromite, barite and lead-zinc. In his capacity as Technical Director, Mr. Dada leads the Company's exploration and resource development function, an activity that has centered on identifying and developing mineral resources in the remote and often inaccessible terrain of the Pakistan–Afghanistan frontier and the mountains of Gilgit Baltistan. He applies modern remote sensing, geospatial analysis and mineral targeting methods to this work, and has overseen the acquisition of mining rights over newly delineated resources across Baluchistan, Khyber Pakhtunkhwa and Gilgit-Baltistan.
